

3M™ Defib-Pads

Bright orange color for safe and effective defibrillation and cardioversions.

3M Innovation

3M™ Defib-Pads save time when life is on the line.

When you're working to save a life, every second is critical. So take advantage of every second you've got with 3M Defib-Pads for defibrillation and cardioversion. The ready-to-use pads (electro-conductive gel supported by a porous non-woven fabric) are faster to apply than gels and creams in multiple cardiac arrest situations and their bright orange color makes them easy to see.

Quick and convenient

- Saves time — just open package, place on patient and follow normal defib protocol
- Easy to remove from patient - no slippery residue to interfere with CPR
- No cleanup

Safe

- High visibility permits proper pad positioning without overlap
- Self-contained pads eliminate "gel bridging," which can cause severe skin trauma or burns to the patient or operator
- No gel bridging also ensures that available energy is delivered to the patient
- No gel means no worry about improperly cleaned paddles

Effective

- Years of proven success
- Success rate equivalent to lowest resistivity gels
- No pitting or corrosion of paddles
