PVC based suits are: AlphaTec® LIGHT/LIGHT FREEFLOW/TRAINER/SPLASH/66-300 series\*.

\* 66-300, 66-310, 66-315, 66-320, 66-330, 66-335

#### **HOW TO PATCH A SUIT**

Make sure that the glue & hardener have not passed the expiry date.

Maximum 10 patches on a suit.

- 1) Prepare the glue.
- a) **Rubber suits**: Mix the Rubber solution (glue) 26-0724 with Desmodur RFE hardener. Mix thoroughly. Use within 2 hours.

b) PVC suits: Use Bostik Universal PVC glue directly from the tube.

NOTE: You can also use Bostik 1782 glue with Desmodur RFE hardener.

- 2) Start on the inside of the suit.
- 3) AlphaTec® SUPER/LIGHT/SPLASH suits:
- a) Select a patch which is large enough to cover the damage with at least 15 mm margin.
- b) Position the patch over the damage and mark around the edge with a pen.

c) Clean both surfaces (suit and patch) with solvent.

 d) Apply one (1) thin layer of glue on the patch and on the suit (where you marked with a pen).

- e) Wait 5-10 minutes (only 3 minutes if using Bostik 1782 glue), until the glue is tacky.
- f) Repeat d) and e) above one time.
- g) Apply the patch. Start in one end to avoid wrinkles.

h) Smooth the patch with your hand, or using a roller.

- 4) AlphaTec® EVO/HPS/FLASH/VPS suits:
- a) Select a plastic foil patch which is large enough to cover the damage with at least 15 mm margin.
- b) Position the patch over the damage and mark around the edge with a pen.
- c) Clean the suit with solvent.
- d) Remove the release paper from the patch.

e) Apply the patch. Start in one end to avoid wrinkles.

f) Smooth the patch with your hand, or using a roller.

- 5) **All suits**: Repeat 3a-3h on the **outside** of the suit.
- 6) Let the suit dry 24 hours before pressure test.

Gas-tight suits must be pressure tested before they are used again.
